The 2D Materials Industry & Innovation Consortium (**2DM-IC**) has the mission of “Boost the European 2DM industry’s competitiveness and economic growth, and support implementation of 2DM technology by EU industrial sectors for the benefit of EU economy and society”.

The field of 2D Materials has experienced significant growth in the past decade, largely driven by the Graphene Flagship project. To bring together the Flagship community and make it grow with more members vesting an interest in the 2D materials field, the 2D Materials Industry & Innovation Consortium (**2DM-IC**) has been formed.

The primary objective of the **2DM-IC** is to provide a unified platform where the identity of the flagship can collectively promote their interests and advocate for their needs at the European level. By consolidating their voice, companies within the consortium gain enhanced visibility and influence in shaping the policies and regulations that govern the 2D materials industry. This collaborative effort ensures that the common interests of the companies are well-represented and considered in decision-making processes.

The **2DM-IC** plays a crucial role in advocating for the interests of the community by providing a platform for collaboration and knowledge exchange and to shape the future of the 2D materials industry.
